

# Checklist-Based Remote Dosimetry Training at a Community Cancer Center

B Mowbray MS CMD RT(T), C Geraghty MS  
Anne Arundel Medical Center, Annapolis, Maryland

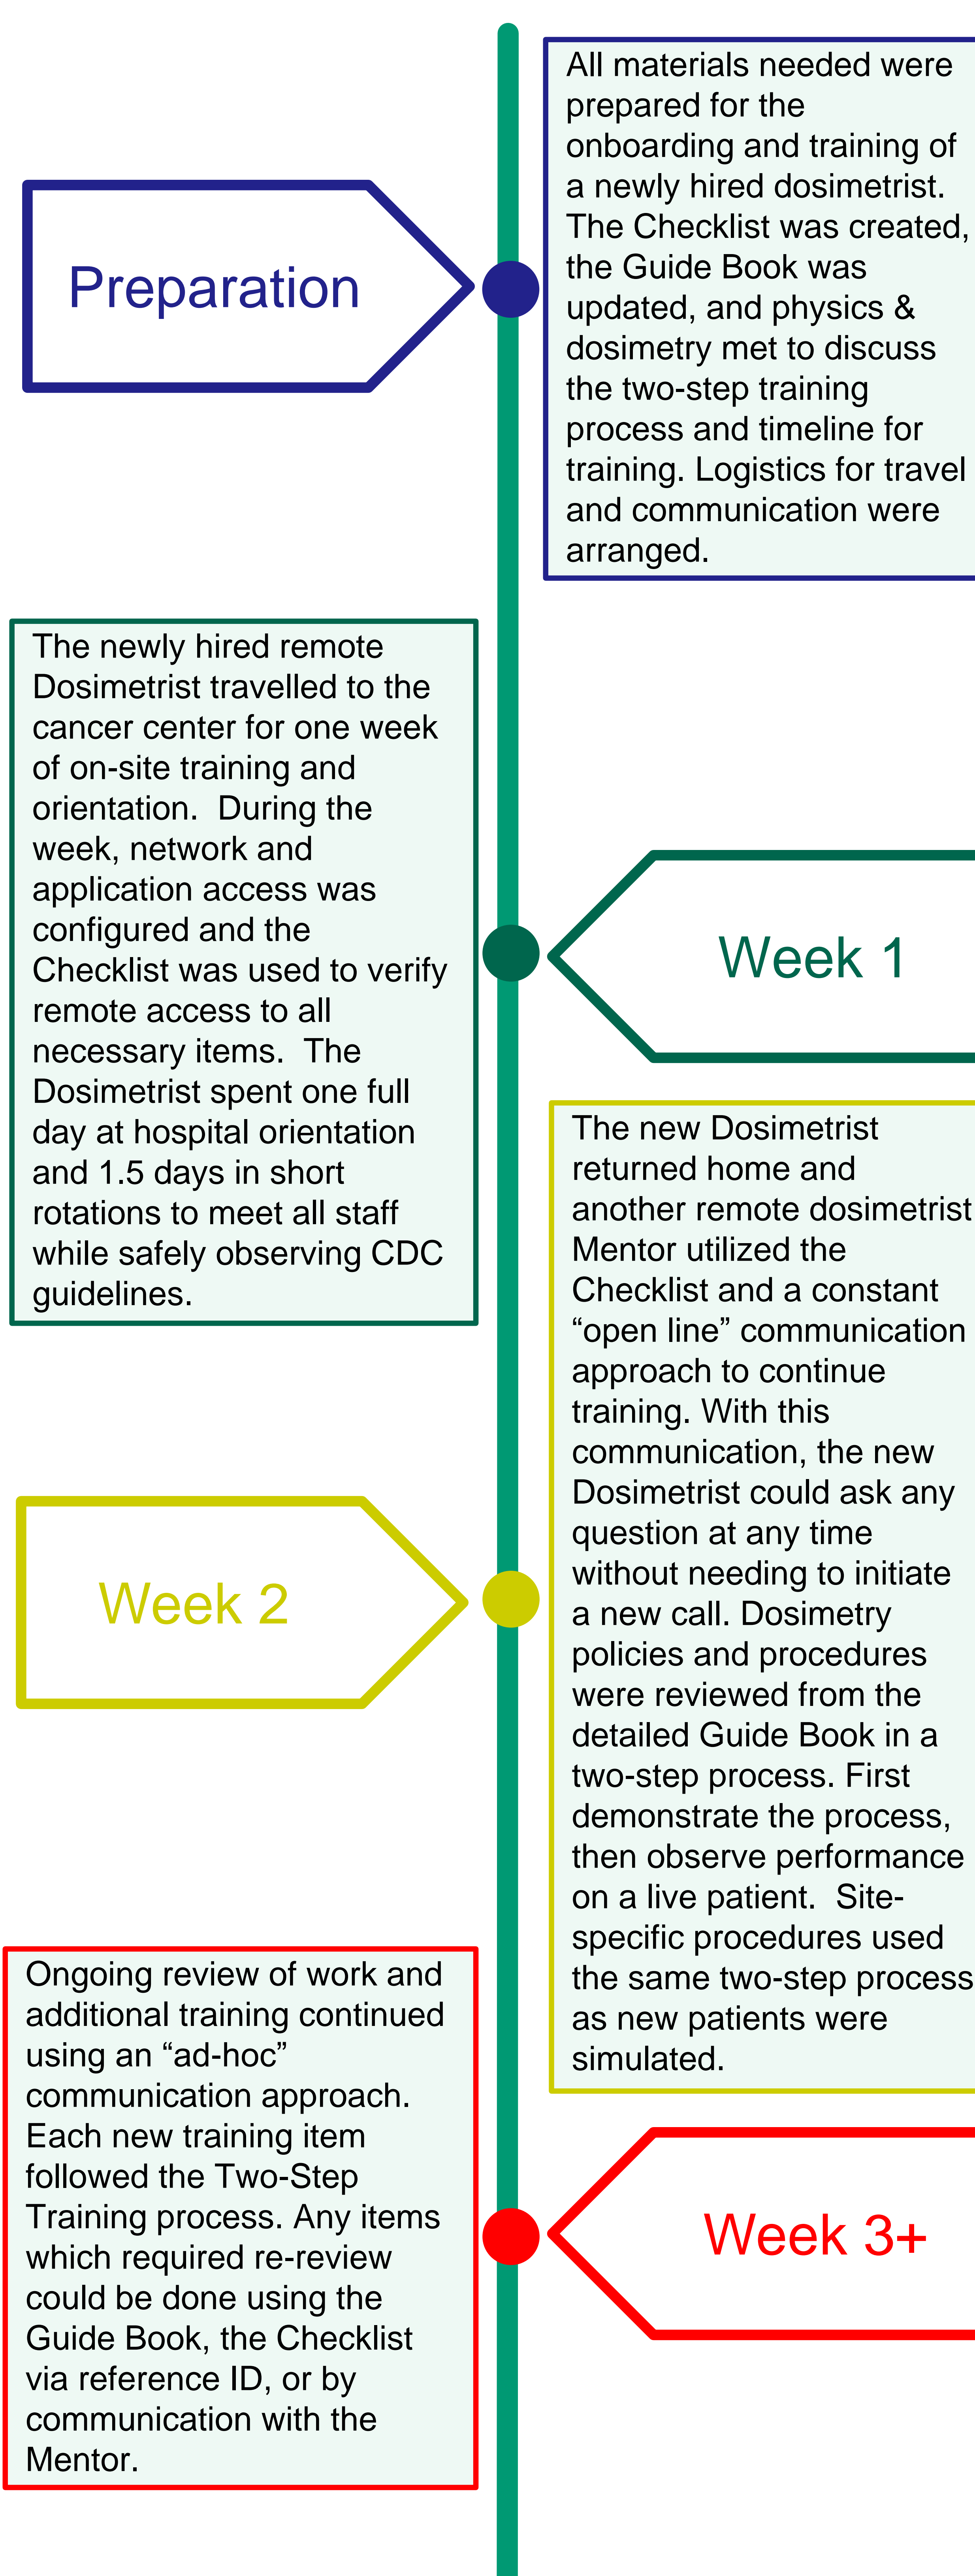

The challenges of the COVID-19 pandemic led our community clinic to transition into a fully remote model for dosimetry. Although the transition was very successful, we were tasked with replacing one of our veteran dosimetrists with a newly hired dosimetrist who would reside and work from another state. Our team was tasked to develop a training process to ensure safe, detail oriented work could be learned and performed in a fully remote setting.

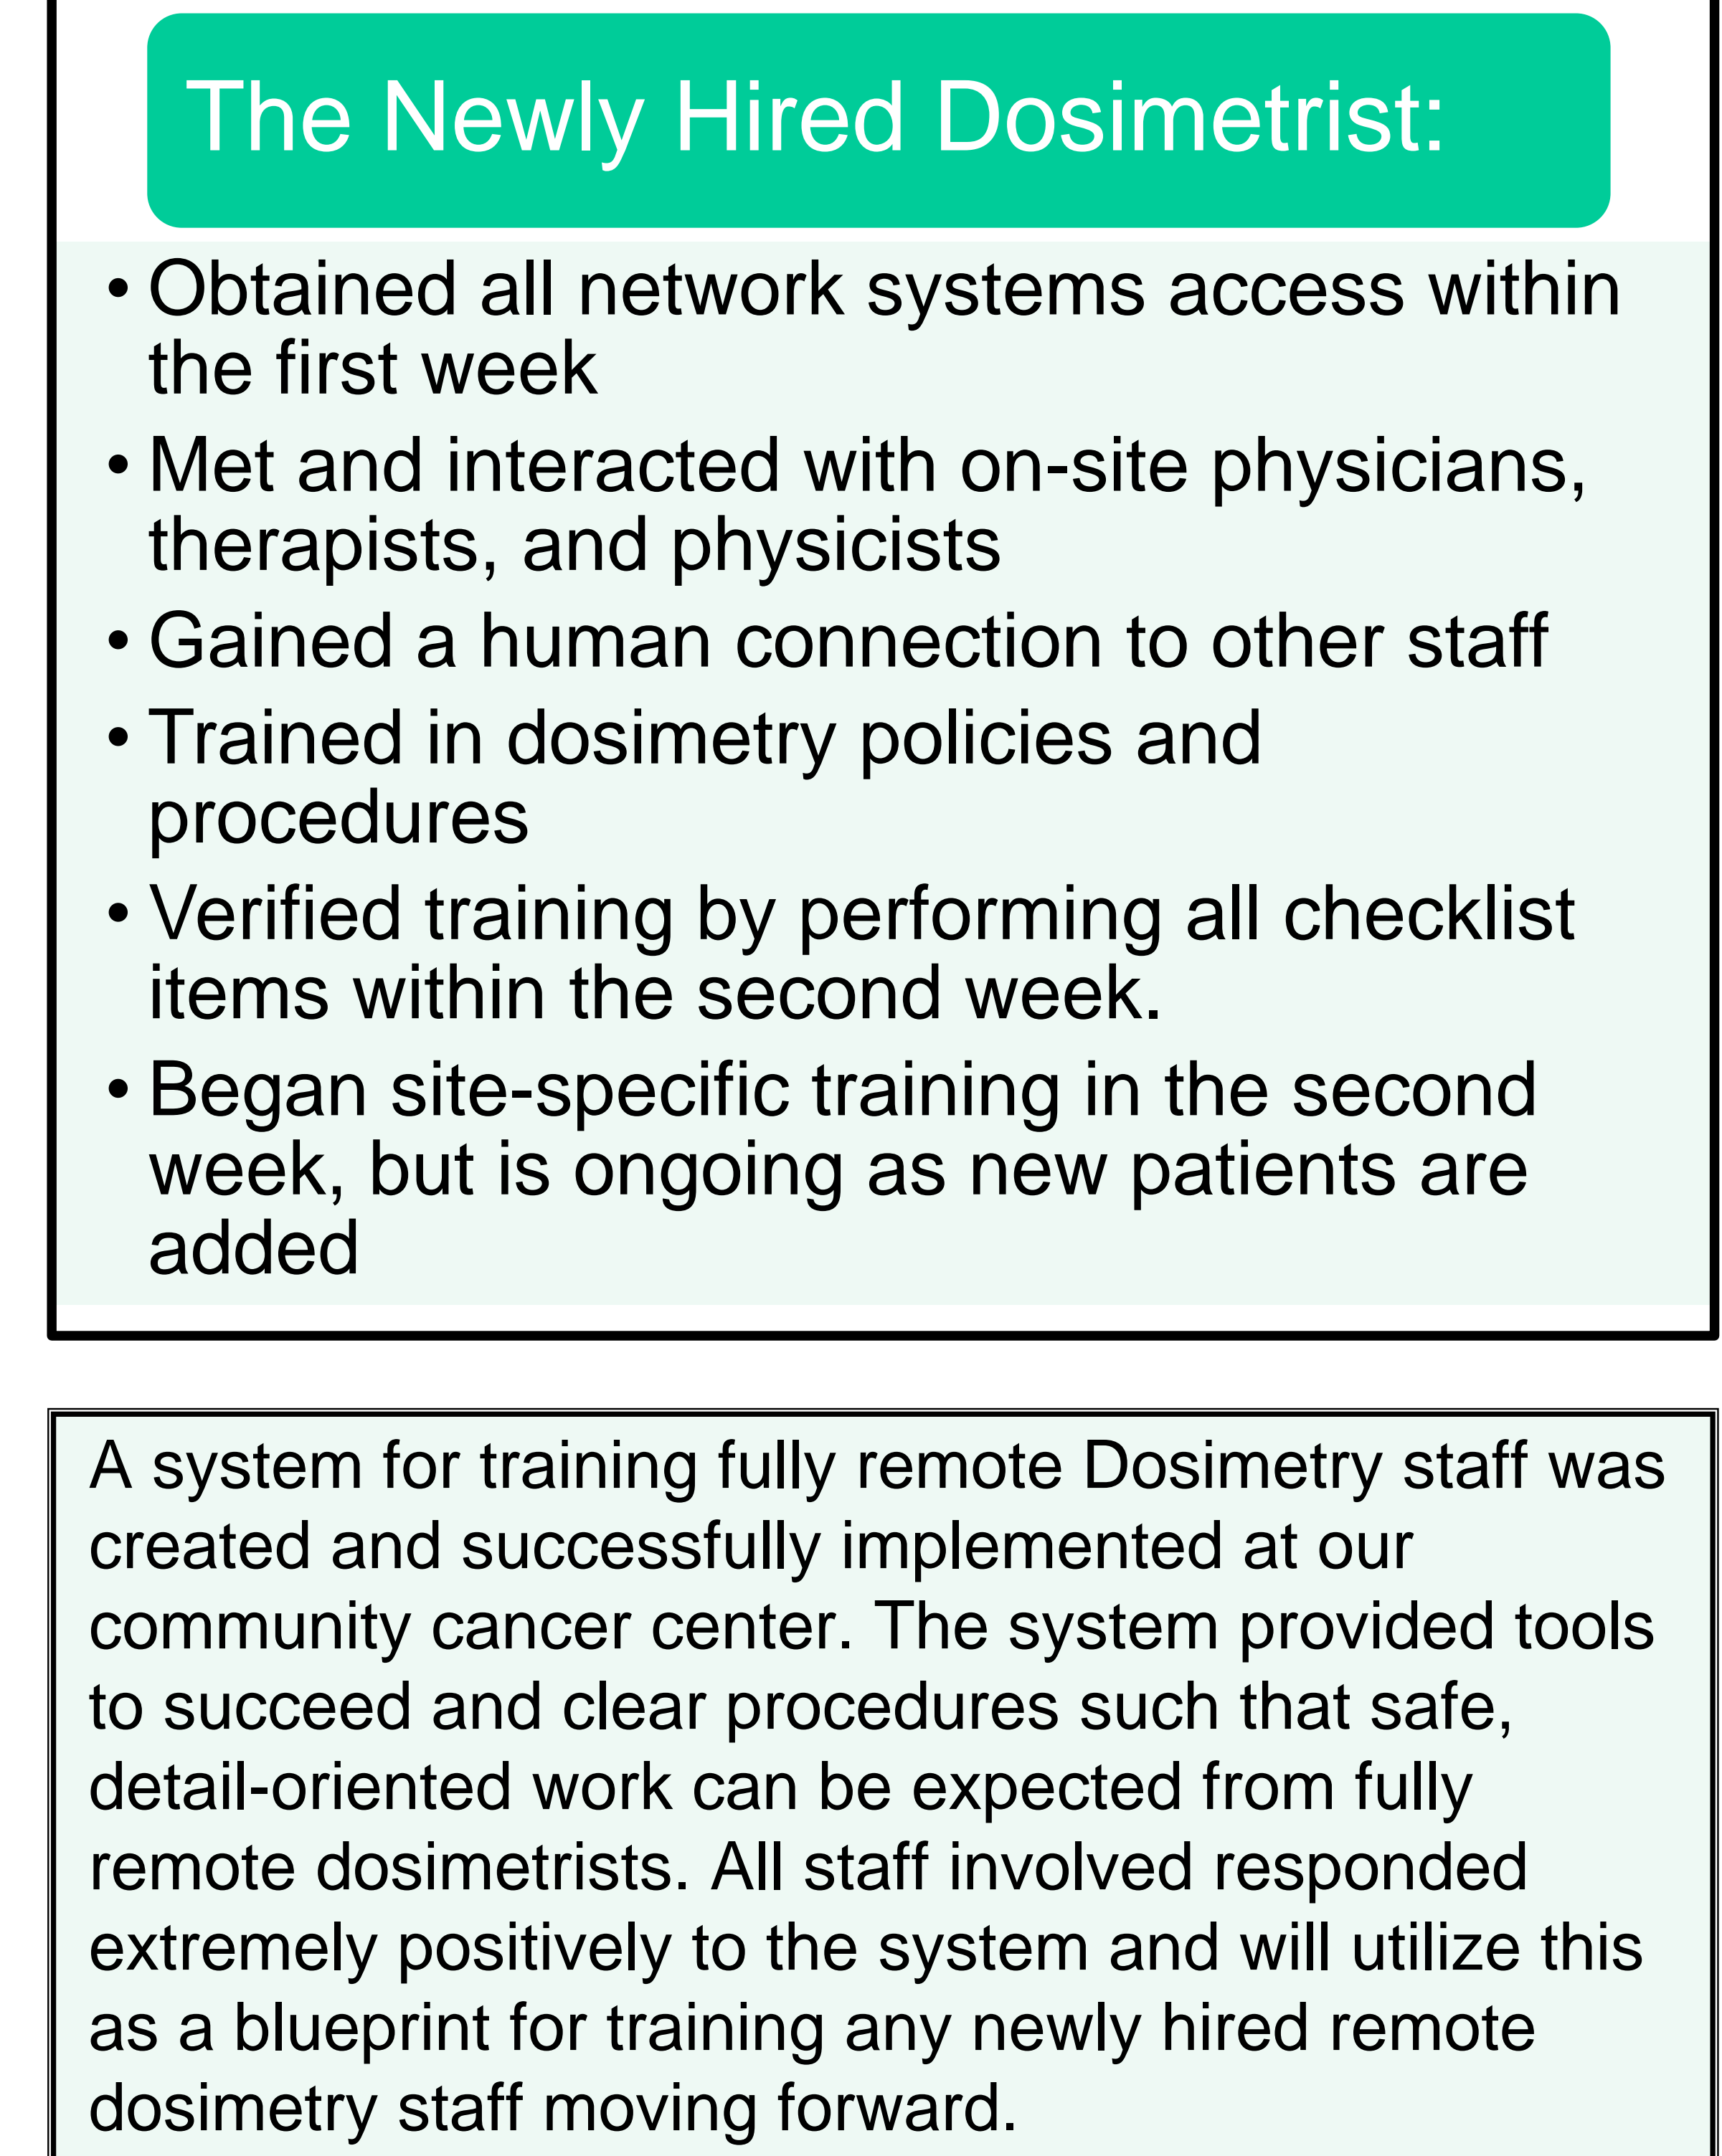

## The Process

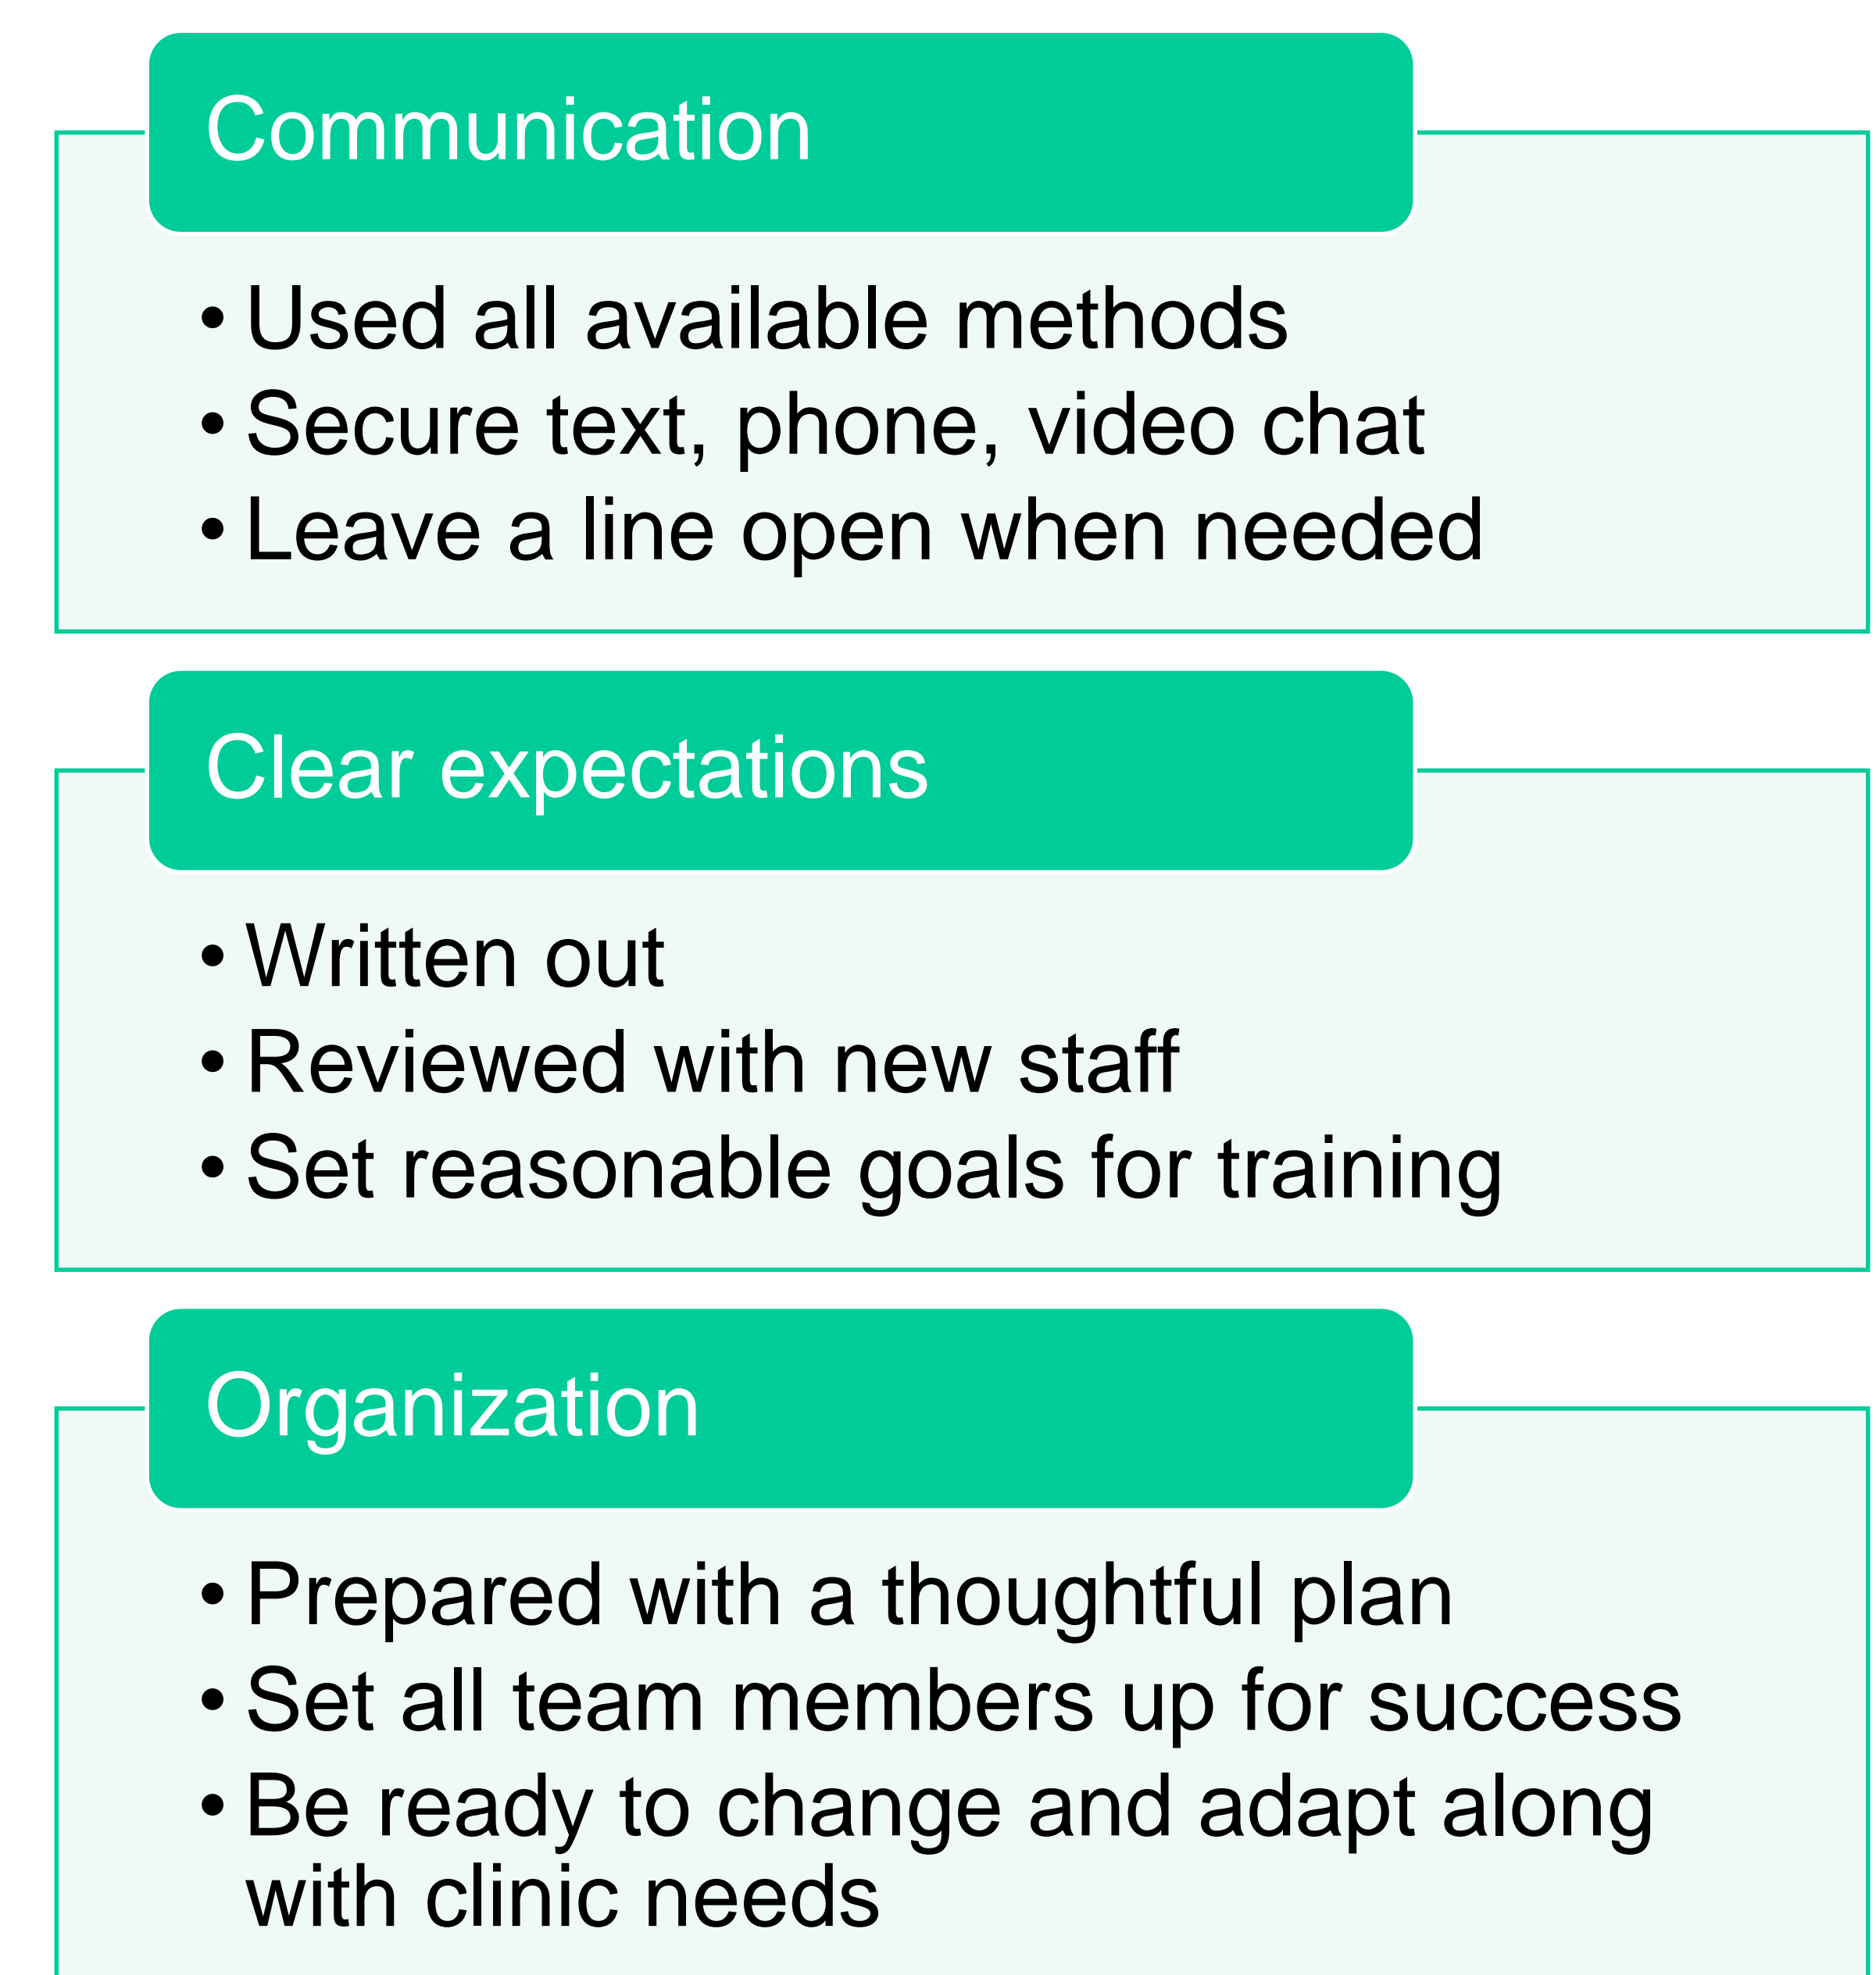

## The Timeline

## The Results

## The Keys to Success
